(54) Title: IMPLANTABLE MEDICAL DEVICE

(57) Abstract: Implantable medical device adapted to be operated in a normal mode of operation and in at least one other mode of operation and provided with a signal detecting means responsive of an external activation. The medical device is provided with a special timing means adapted to be programmed with a specified time period, wherein the device is adapted to enter said one other mode of operation being a predefined special mode of operation if an external activation is detected by said signal detecting means during said specified time period, and that the device is adapted to enter a normal test mode of operation if an external activation is detected by said signal detecting means outside said specified time period.
